

DYNAMIC MONOPOLAR RADIOFREQUENCY FOR SUCCESSFUL NON-INVASIVE TREATMENT OF SKIN LAXITY AND BODY CONTOURING

R. A. Weiss, MD, FAAD, M. A. Weiss, MD, FAAD
Whitepaper

HIGHLIGHTS

- **30 patients** (28 female, 2 male) treated for facial skin laxity, neck skin laxity and arm fat reduction.
- Subjects received 4 treatments **7-10 days** apart.
- **93.3%** subjects showed significant decrease in facial skin laxity.
- Average circumferential reduction for arm contour patients was **2.1cm**.
- **40-42°C** surface temperature for 4-5 minutes.
- Device proven to have consistent efficacy across various body parts while being **completely safe** (no adverse events reported) and while maintaining patient comfort.

Reduction of skin laxity.

Reduction of submandibular fat.

Reduction of arm circumference and arm laxity.
